

SUCCULENT WREATH (Feature: 3010)

A living wreath planted with Succulents makes a great feature for your home. Their pale green and blue tones mixed with the unique biology of the plants draw your eyes towards the flame

SYNOPSIS

Succulents - particularly the shallow rooted kind used here can grow and thrive in surprisingly little soil, or in this case moss. So you can use them to create this decorative wreath and then replant them into the pot or container you removed them from. This lovely wreath is relatively simple to create with a little patience and care, and the end result will make a beautiful decoration of over the Christmas table or as a welcome by the door.
